# OIC OUTLOOK

## AGRO-INDUSTRY IN THE OIC MEMBER COUNTRIES: AN OVERVIEW OF POTENTIALS

---

### INTRODUCTION

---

The problems facing developing countries and countries with economies in transition are many and daunting: widespread poverty, low levels of productivity and infrastructure development as well as poorly integrated markets, especially in rural areas. These problems are further exacerbated by underdeveloped rural industrial organisation characterized by small and medium-size enterprises inadequately linked to world markets and, in some cases, by a still incomplete process of economic liberalisation in the transition from a centrally controlled economy to a market system.

With a total land area of more than 3 billion hectares and a total population of more than 1.5 billion in 2009, the OIC Member Countries (MCs) accounted for 24% of the world total land area and 22.45% of its total population. With a total agricultural area of more than 1.4 billion hectares in 2007, the OIC MCs accounted for 28.59% of the world agricultural area of which 38% of its total population is employed. Yet, the average contribution to total GDP in the group of the OIC is less than 20% which is an issue that needs urgent attention as agriculture is still considered as a primary economic activity that is assumed to play a significant role in the economies of many OIC MCs. A large proportion of resources are used to meet the demand for agricultural products through technology improvements, mainly in seeds, fertilizers and irrigation. Little attention has been given to the value chain through which agricultural products reach final consumers within the country and abroad. The magnitude of the damage caused by this neglect becomes obvious if one considers the enormous added value and employment opportunities that can be generated along the value chain from producers to consumers.

Interventions in agro-industry development administered in collaboration with the private sector should be designed to create the adequate environment and enhance the emergence of locally owned agro-processing industries, capable of creating jobs and increasing incomes. Agro-industries can promote industrialisation and urban employment, break the productivity gap of development, reduce food costs and supply uncertainties and improve the diet.

In the light of these challenges, this analysis attempts to provide a general view of the state of agro-industry in the OIC region. For this purpose, the OIC Member Countries will be firstly analysed through their main agricultural products with respect to the world's top 20 agricultural products. Then, due to the lack of direct data on agro-industries, the related analysis will be processed through commenting on the level of feed and waste in this respect. Finally, some concluding remarks are provided.

---

**MAIN AGRICULTURAL PRODUCTS**

---

The world's top 20 agricultural products and the respective shares of the group of the OIC Member Countries are presented below in Table 1. As can be seen from the Table, the group of the OIC Member Countries plays a highly significant role in the production of several of these agricultural products. That is, the OIC region is an important supplier of many agricultural products that are within the top 20 on a world scale. Figures of 2007 indicate that the OIC region is a main producer of 14 of the top agricultural products with production shares larger than 10%; Cassava (37.26%), Tomatoes (28.05%), Buffalo Milk (27.48%), Rice (19.96%), Wheat (18.32%), Watermelons (17.76%), Dry Onions (17.72%), Grapes (17.25%), Barley (13.67%), Bananas (12.22%), Cow Milk (11.70%), Sugar Beet (11.23%), Apples (11.01%), and Potatoes (10.84%).

**Table 1: World's Top 20 Agricultural Products (10<sup>3</sup> Metric Tonnes), 2007**

	<b>World</b>	<b>OIC</b>	<b>OIC % of World</b>
Sugar Cane	1627451	132579	8.15
Maize	788112	46259	5.87
Rice	657414	131228	19.96
Wheat	611102	111934	18.32
Cow Milk	571403	66836	11.70
Potatoes	323543	35085	10.84
Sugar Beet	246554	27687	11.23
Vegetables	244719	16568	6.77
Cassava	224132	83518	37.26
Soybeans	219546	178	0.08
Tomatoes	133260	37386	28.05
Barley	133097	18193	13.67
Sweet Potatoes	99701	8285	8.31
Watermelons	93692	16643	17.76

Apples	66092	7275	11.01
Grapes	65971	11382	17.25

Source: FAO Online Statistical Database (FAOSTAT), <http://faostat.fao.org/>

Looking deeper into this picture, an OIC country-wise analysis gains importance with respect to these products in order to identify the major players and thus analyse, in the next section, their related agro-industrial situation.

In doing so, it is of great importance to notify that the lack of direct data on agro-industries will be adjusted through analysing the above provided production quantities after subtracting the quantities of food. The resulting quantities, as defined by FAO, are those wasted and/or used as feed. The analysis will include those top five product shares

of the OIC region; Cassava (37.26%), Tomatoes (28.05%), Buffalo Milk (27.48%), Rice (19.96%), and Wheat (18.32%).

Food, as defined by FAO, is the total amount of the commodity available as human food during the reference period. Data include the commodity in question, as well as any commodity derived as a result of further processing.

Thus, this analysis will roughly consider the level of agro-industry through commenting on the level of feed & waste in this respect.

---

**LEVEL OF AGRO-INDUSTRY IN THE MAIN AGRICULTURAL PRODUCTS**

---

Taking Cassava into consideration, the 37.26% share of the OIC region in the world's Cassava output comes mainly from Nigeria and Indonesia (See Table 2 below). Table 2 lists those OIC Member Countries with production quantity above 500,000 Metric Tonnes.

**Table 2: Cassava Production in the OIC Region (10<sup>3</sup> Metric Tonnes), 2007**

Country	Production	Food*	Feed & Waste	% of Feed & Waste
Nigeria	43410	16174	27236	62.74
Indonesia	19988	8999	10989	54.98
Mozambique	5039	4798	241	4.78
Uganda	4456	2779	1677	37.63
Cote d'Ivoire	2342	1977	365	15.58
Benin	2284	1144	1140	49.91
Cameroon	2100	1604	496	23.62
Guinea	1095	913	182	16.62
Togo	773	627	146	18.89

Source: FAO Online Statistical Database (FAOSTAT), <http://faostat.fao.org/>

Note: Food figures are for 2005.

Table 2 shows that a total of more than 41 Million Metric Tonnes of Cassava is wasted and/or used for animal feeding in only 4 OIC Member Countries; namely Nigeria, Indonesia, Uganda and Benin. The percentage of this quantity exceeds 50% of their total production quantity. This is a sign of significantly high potential for agro-industry opportunities in this respect. Taking into consideration the direct use of Cassava as food, the level of the processed Cassava hidden within the food category can be expected, on average, to remain low and primitive.

Taking Tomatoes into consideration, the 28.05% share of the OIC region in the world's Tomatoes output comes mainly from Turkey, Egypt and Iran (See Table 3 below). Table 3 lists those OIC Member Countries with production quantity above 500,000 Metric Tonnes.

**Table 3: Tomatoes Production in the OIC Region (10<sup>3</sup> Metric Tonnes), 2007**

Country	Production	Food*	Feed & Waste	% of Feed & Waste
Turkey	9945	6240	3705	37.25
Egypt	8639	6807	1832	21.21
Iran	5000	4171	829	16.58
Uzbekistan	1680	1156	524	31.19
Morocco	1237	959	278	22.47
Nigeria	1079	832	247	22.89
Tunisia	1000	764	236	23.60
Iraq	830			
Algeria	820	1004		
Syria	733	685	48	6.55
Sudan	642	456	186	28.97
Jordan	610	205	405	66.39
Kazakhstan	515	495	20	3.88
Pakistan	502	435	67	13.35

Source: FAO Online Statistical Database (FAOSTAT), <http://faostat.fao.org/>

Note: Food figures are for 2005.

Table 3 shows that a total of more than 7 Million Metric Tonnes of Tomatoes is wasted and/or used for animal feeding in only 5 OIC Member Countries; namely Turkey, Egypt, Iran, Uzbekistan and Jordan. The percentage of this quantity reaches 35% of their total production quantity. This is a sign of significantly high potential for agro-industry opportunities in this respect. Taking into consideration the direct use of Tomatoes as food, the level of the processed Tomatoes hidden within the food category can be expected, on average, to remain low and primitive.

Taking Buffalo Milk into consideration, the 27.48% share of the OIC region in the world's Buffalo Milk output, interestingly, comes only from Pakistan (20372 Thousand Metric Tonnes) and Egypt (2610 Thousand Metric Tonnes). Since food data is not available for Buffalo Milk, commenting on the related agro-industry level is not provided.

Taking Rice into consideration, the 19.96% share of the OIC region in the world's Rice output comes mainly from Indonesia and Bangladesh (See Table 4 below). Table 4 lists those OIC Member Countries with production quantity above 500,000 Metric Tonnes.

**Table 4: Rice Production in the OIC Region (10<sup>3</sup> Metric Tonnes), 2007**

Country	Production	Food*	Feed & Waste	% of Feed & Waste
Indonesia	57157	42158	14999	26.24
Bangladesh	43057	36721	6336	14.72
Pakistan	8345	2979	5366	64.30
Egypt	6877	3883	2994	43.54
Nigeria	3186	4630		
Iran	2800	3229		
Malaysia	2375	2926		
Guinea	1402	1269	133	9.49
Mali	1082	954	128	11.83
Sierra Leone	1000	648	352	35.20
Cote d'Ivoire	606	1260		
Afghanistan	552			

Source: FAO Online Statistical Database (FAOSTAT), <http://faostat.fao.org/>

Note: Food figures are for 2005.

Table 4 shows that a total of almost 30 Million Metric Tonnes of Rice is wasted and/or used for animal feeding in only 4 OIC Member Countries; namely Indonesia, Bangladesh, Pakistan and Egypt. The percentage of this quantity exceeds 37% of their total production quantity. This is a sign of significantly high potential for agro-industry opportunities in this respect. Taking into consideration the direct use of Rice as food, the level of the processed Rice hidden within the food category can be expected, on average, to remain low and primitive.

Taking Wheat into consideration, the 18.32% share of the OIC region in the world's Wheat output comes mainly from Pakistan, Turkey, Kazakhstan and Iran (See Table 5 below). Table 5 lists those OIC Member Countries with production quantity above 500,000 Metric Tonnes.

**Table 5: Wheat Production in the OIC Region (10<sup>3</sup> Metric Tonnes), 2007**

Country	Production	Food*	Feed & Waste	% of Feed & Waste
Pakistan	23295	16858	6437	27.63
Turkey	17234	13047	4187	24.29
Kazakhstan	16467	2432	14035	85.23
Iran	15000	11136	3864	25.76

Kyrgyz Republic	709	985		
Tajikistan	649	1322		

Source: FAO Online Statistical Database (FAOSTAT), <http://faostat.fao.org/>

Note: Food figures are for 2005.

Table 5 shows that a total of more than 33 Million Metric Tonnes of Wheat is wasted and/or used for animal feeding in only 7 OIC Member Countries; namely Pakistan, Turkey, Kazakhstan, Iran, Uzbekistan, Syria and Turkmenistan. The percentage of this quantity exceeds 40% of their total production quantity. This is a sign of significantly high potential for agro-industry opportunities in this respect. Taking into consideration the direct use of Wheat as food, the level of the processed Wheat hidden within the food category can be expected, on average, to remain low and primitive.

---

## CONCLUDING REMARKS

---

Most of the efforts used to meet the demand for agricultural products mainly focus on technology improvements. Little attention has been given to the value chain through which agricultural products reach final consumers within the country and abroad. The magnitude of the damage caused by this neglect becomes obvious if one considers the enormous added value and employment opportunities that can be generated along the value chain from producers to consumers.

The OIC region accounted for 24% of the world total land area and 22.45% of its total population in 2009. It also accounted for 28.59% of the world agricultural area of which 38% of its total population is employed in 2007. Yet, the average contribution to total GDP in the group of the OIC is less than 20% which is an issue that needs urgent attention as agriculture is still considered as a primary economic activity that is assumed to play a significant role in the economies of many OIC MCs.

The OIC region is an important supplier of many agricultural products that are within the top 20 on a world scale. It is a main producer of 14 of the top agricultural products with production shares larger than 10%; Cassava (37.26%), Tomatoes (28.05%), Buffalo Milk (27.48%), Rice (19.96%), Wheat (18.32%), Watermelons (17.76%), Dry Onions (17.72%), Grapes (17.25%), Barley (13.67%), Bananas (12.22%), Cow Milk (11.70%), Sugar Beet (11.23%), Apples (11.01%), and Potatoes (10.84%).

The lack of direct data on agro-industries is adjusted through analysing the production quantities after subtracting the quantities of food. The resulting quantities, as defined by FAO, are those wasted and/or used as feed. The analysis has been applied to those top five product shares of the OIC region; Cassava (37.26%), Tomatoes (28.05%), Buffalo Milk (27.48%), Rice (19.96%), and Wheat (18.32%). The analysis has roughly considered the level of agro-industry through commenting on the level of feed & waste in this respect.

Excluding Buffalo Milk (Food data is not available), the analysis reached a very critical outcome that urgently needs to be treated as a huge potential for agro-industrial policies. More than 41 Million Metric Tonnes of Cassava is wasted and/or used for animal feeding in only 4 OIC Member Countries; Seven Million Metric Tonnes of Tomatoes in only 5 OIC MCs; Almost 30 Million Metric Tonnes of Rice in only 4 OIC MCs; Thirty three Million Metric Tonnes of Wheat in only 7 OIC MCs. Table 6 below shows the summary analysis which indicates the agro-industry potentials in the OIC MCs. The mentioned agricultural areas in the respected countries constitute a very promising future only if the issue is seriously considered by the relevant policy makers.

**Table 6: Agro-Industry Potentials in the OIC Member Countries**

	<b>Cassava</b>	<b>Tomatoes</b>	<b>Rice</b>	<b>Wheat</b>
Bangladesh			<b>X</b>	
Benin	<b>X</b>			
Egypt		<b>X</b>	<b>X</b>	
Indonesia	<b>X</b>		<b>X</b>	
Iran		<b>X</b>		<b>X</b>
Jordan		<b>X</b>		
Kazakhstan				<b>X</b>
Nigeria	<b>X</b>			
Pakistan			<b>X</b>	<b>X</b>
Syria				<b>X</b>
Turkey		<b>X</b>		<b>X</b>
Turkmenistan				<b>X</b>
Uganda	<b>X</b>			
Uzbekistan		<b>X</b>		<b>X</b>

Table 6 indicates the urgent need for serious agro-industry investments in Cassava by Benin, Indonesia, Nigeria and Uganda; Tomatoes by Egypt, Iran, Jordan, Turkey and Uzbekistan; Rice by Bangladesh, Egypt, Indonesia and Pakistan; Wheat by Iran, Kazakhstan, Pakistan, Syria, Turkey, Turkmenistan and Uzbekistan.

Within those indicated in Table 6, the top agro-industry potentials are seen in Nigeria for Cassava, Turkey for Tomatoes, Indonesia for Rice, and Kazakhstan for Wheat.
