New phone app to be used to report smoking ban violations

The Health Ministry, in cooperation with Yeşilay, has developed an app that allows users to report violations in the areas where smoking is banned

urkey's Health Ministry has developed a mobile application that will permit app users to report violations in non-smoking areas.

Health Minister Recep Akdağ presented the app, the "Green Detector" (Yeşil Detektör), on Jan. 27. The app was developed in coordination with Turkey's Green Crescent (Yesilay) and will give authorities the exact location where violations are taking place. The ministry plans to take immediate action when it receives a notification.

Akdağ said the sensitivity of citizens regarding the issue was "very significant," noting that they wanted to make good use of the technology in their fight against smoking.

Notification appears

"Now when people smoke in an enclosed place, you have to dial 184 and report the issue. The authorities then notify the nearest auditor to go to the reported place. Despite this, the system isn't working the way we want. But when you launch the 'Green Detector' app, a notification appears in our system which also provides the location the report was sent from. We can then directly go there. The sensitivity of

Turkish Health Minister Recep Akdağ shows the newly-developed smartphone application, which permits users to report violations in non-smoking areas. The sensitivity of our citizens is very significant. Our citizens should not stay silent. They should report it, Akdağ told state-run Anadolu Agency.

our citizens is very significant. Our citizens should not stay silent. They should report it," he said. Smoking in enclosed areas is prohibited all over Turkey.

Akdağ said cigarette packages will change.

"The new packages will be covered in warnings and the brand will have minimal space.

This practice started in Australia and has showed successful results," he said, adding that cigarettes would be sold from closets, far from vision,

"We've prepared a bill that proposes cigarettes should not be sold in visible places. Generally the grocery stores put the products they want to sell to places close to the door and the cash point. We are introducing a new article in order for it to be dissuasive," he said.

Noting that cigarette usage had been increasing in recent years, Akdağ said smoking levels had risen above 30 percent.

"There has been a relaxation in the ban on smoking in closed

places. We need to take new precautions. We need to raise awareness in the society. We are preparing a serious media campaign for that," he also said.

During his interview, Akdağ said the ministry had prepared a campaign with Yesilay and that would be conducted within the following three months.

Turkey marks singular achievement in tobacco control

History of tobacco control in Turkey

- in Turkey in 1991.
- Turkey's first tobacco control bill was vetoed in 1991. Parliament tabled a 1992 bill.
- In 1996, tobacco control legislation was enacted. Implementation was successful despite tobacco industry opposition, but enforcement was uneven.
- In 2002, Turkey established the Tobacco and Alcohol Market Regulatory Authority (TAPDK).
- The first organized anti-to-bacco civil society movement started
 Turkey signed the WHO FCTCon 28 April 2004 and ratified it on 30 November 2004, one of the first countries to do so.
 - Following ratification, the Ministry of Health (MoH) formed a National Tobacco Control Committee to prepare a national tobacco control programme and implementation plan.
 - The tobacco control law was substantially strengthened in 2008, with clearly established enforcement mechanisms. instituted by the MoH and TAPDK that include inspection teams in each province.

Reducing demand for tobacco in Turkey

MORETHAN 13% DECLINE IN SMOKING PREVALENCE IN TURKEY AFTER COMPREHENSIVE TOBACCO CONTROL IS PUT IN PLACE

Monitoring of tobacco use and prevention policies

- Turkey was the first country to complete data collection for the Global Adult Tobacco Survey (GATS) in 2008, and was one of two countries to repeat GATS in 2012.
- Turkey conducted the Global Youth Tobacco Survey (GYTS) in 2003, 2009 and 2012.
- A study of smoking and health-care professionals was conducted in 2007 and repeated in 2011.

 In addition to these systematic surveys, other surveys show strong public support for the law, increased compliance, and improvements in indoor air quality and health benefits.

Protecting people from tobacco smoke

- Turkey's first smoke-free law was enacted in 1996 and substantially strengthened in 2008 to cover the hospitality industry, most importantly adding restaurants, bars and cafés.
- In addition, the MoH and TAPDK issued regulations to ensure. compliance. However, a few exceptions are still in place.

Offering help to guit to bacco use

- The 2008 legislation charged the MoH to develop programmes to help people stop using tobacco and ensure accessibility of cessation medications.
- The government established a national guit line service in 2010, and began to cover costs of nicotine replacement therapy and othercessation services.

Warning about the dangers of tobacco

Health warning labels

- The 1996 law mandated warning labels, but they were only small. text warnings and did not appear on the main package display
- In 2005, the TAPDK required larger text warnings covering 30-40% of the front and back of packages.
- In 2012 the TAPDK mandated pictorial warnings covering 65 % of both the package front and back, and prohibited misleading and deceptive terms such as "mild" or "light".

Anti-tobacco mass media campaigns

■ The 1996 law directed all television stations to broadcast antito bacco programmes, but many were aired late at night and

Testimonial anti-tobacco TV campaign showing health effects of tobacco use.

- The 2008 revision required that programming be aired during prime viewing. hours to reach more. people.
- Media campaigns featured anti-tobacco advertisements

- pretested for effectiveness, including the hard-hitting "Spoinge"
- Campaigns were also launched to publicize provisions of the new law, in particular the smoke-free requirements and the national quit line service.

Enforcing of bans on tobacco advertising, promotion and sponsorship

- The 1996 law banned virtually all tobacco advertisement and promotion, but not sponsorships.
- The 2008 revision expanded the ban to include all sponsorships, and added retail display restrictions.
- In 2012, Turkey implemented a total TAPS ban (including brand) sharing and brand stretching).

Raising taxes on tobacco

- To bacco taxes in Turkey represented 65-70 % of the retail price
- Since passage of the revised law in 2008, taxes were gradually increased, and now represent 80.3% of the retail price.

Tobacco use in Turkey is declining

Although Turkey has had a long tradition of tobacco use and high smoking prevalence, particularly among men, tobacco use is now declining at unprecedented rates.

- Among adults, data from GATS show that smoking prevalence. significantly decreased from 31.2 % (16 million) in 2008 to 27.1% (14.8 million) in 2012.
- This represents a 13.4% relative decline (13.5% for males:
- Despite this sharp decline, however, more than a quarter of Turkey's adults continue to use tobacco.

Turkey: an example for other countries

Turkey is the first country to attain the highest level of achievement in all six. MPOWER measures. This progress is a testament to the Turkish government's sustained political commitment to tobacco control, and is an excellent example of collaboration between government WHO and other international. health organizations, and civil society.

The need for other countries to follow Turkey's example and apply all six. MPOWER measures at the strongest level is urgent. Even more progress is possible in Turkey and elsewhere if we continue doing what works.

 Subsidized cessation assistance can be offered to more people; and access made easier.

- Health warning labels can be made even larger with more. impactful images, and anti-to bacco advertising campaigns can
- Bans on TAPS can be strengthened to include all point-of-sale and promotional activities.
- Taxes can be raised further, with revenues specifically earmarked. for tobacco control.
- Enforcement of all measures can be strengthened.

WHO REPORT ON THE GLOBAL TOBACCO EPIDEMIC, 2013

TURKEY SETS A GLOBAL MODEL

Several countries visited Turkey for first-hand exchange on Turkey's experience in tobacco control activities with a view to adapt them to their local conditions.
